# MUSHROOM CLASSIFICATION
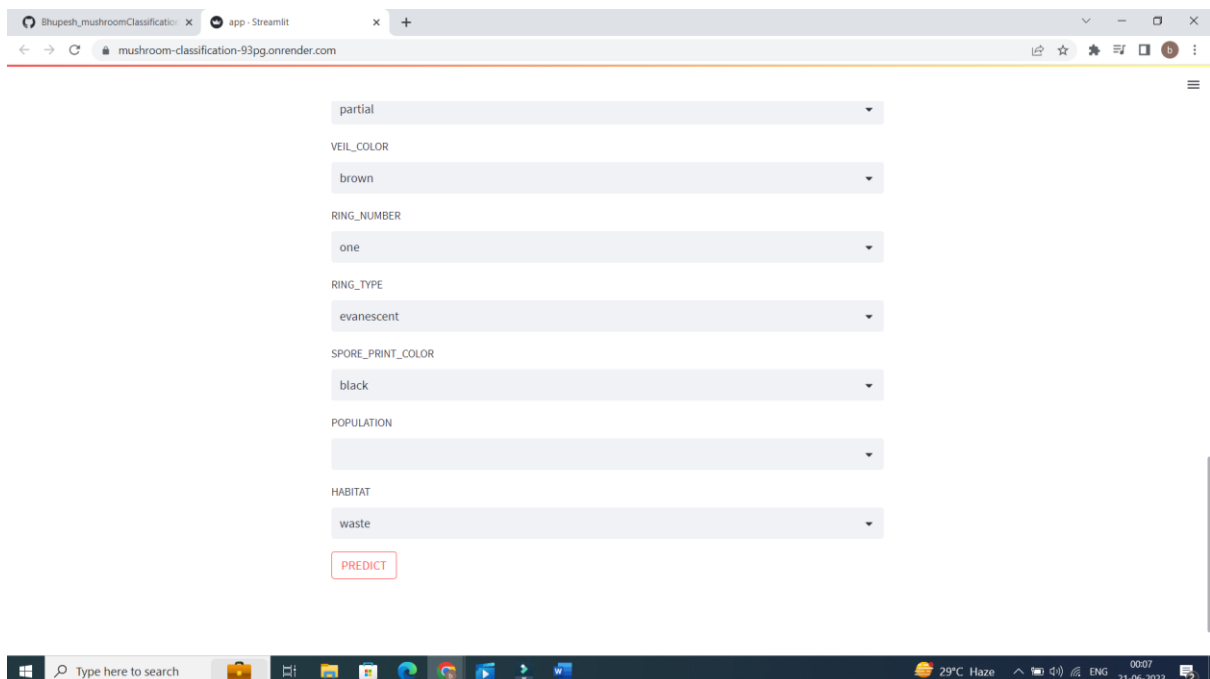

By

BHUPESH PANDEY

When you run the mushroom classification in local or in cloud using streamlit you will be able to see user interface like this
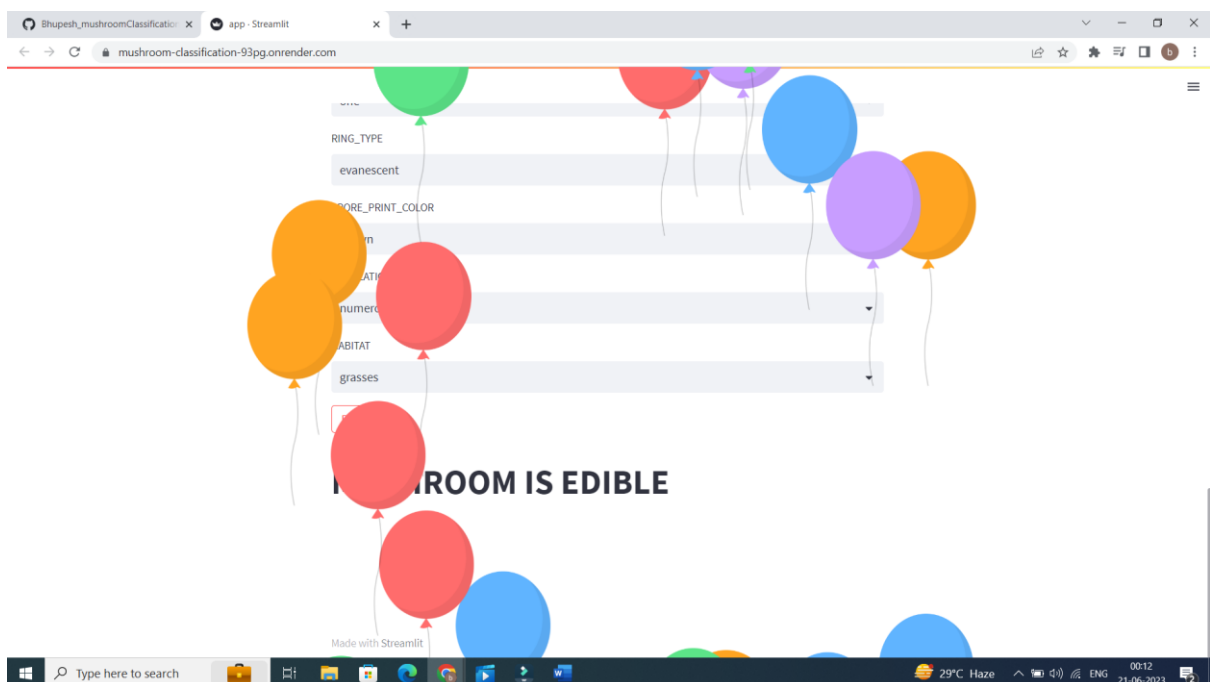

If the user misses to select even a single feature or element in the blank bar the app won't able to make predictions
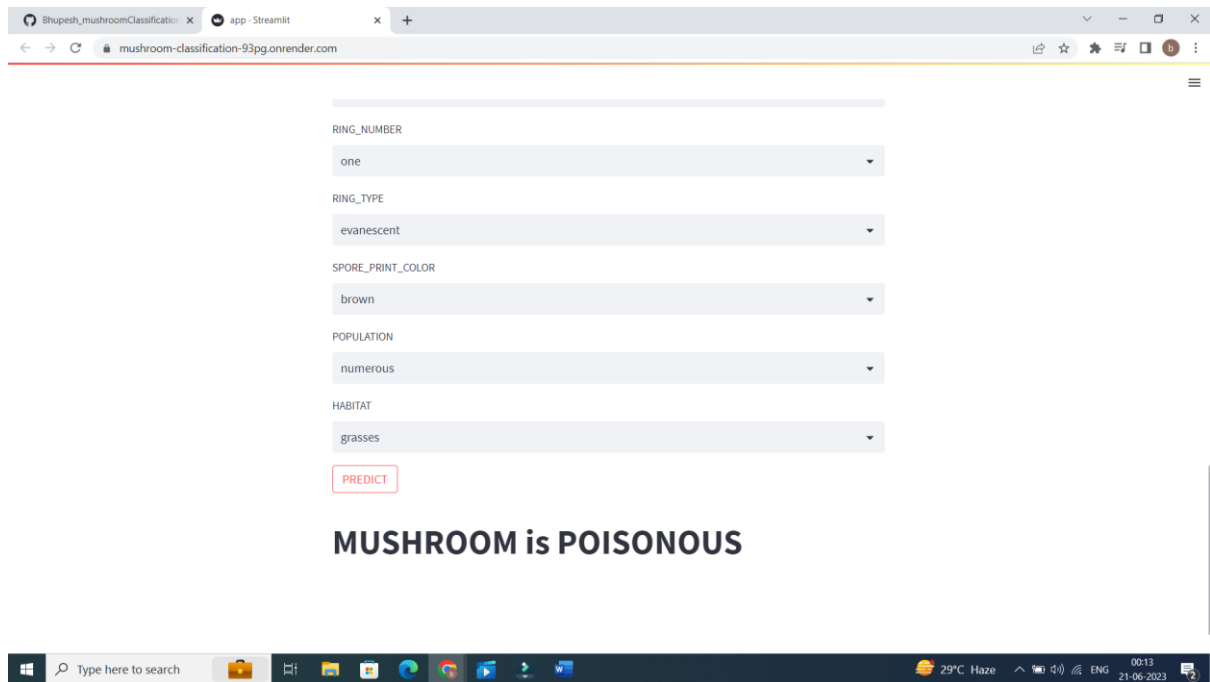

There are many other options which streamlit application provides to the user , the user can go through streamlit documentation to know more about it. link : https://docs.streamlit.io/

When the user selects all the features of mushroom if the mushroom is Edible then balloons will pop up and it will show that mushroom is edible.

When the user selects all the features of mushroom and if the mushroom is Poisonous than mushroom will predict and show that mushroom is poisonous
